

Sansa clip drivers windows 10

By John Smith i John Wiley/Demand Media The SanDisk Sansa Clip is a personal MP3 player that stores and plays thousands of audio files. It syncs with Rhapsody, where you can purchase and download music directly from the internet to your Sansa Clip. Brand new Clips sometime do not initially sync with computers. As long as your computer meets the basic requirements, the fix is usually simple, i John Wiley/Demand Media Charge the Sansa battery before plugging into the computer will not recognize it. i John Wiley/Demand Media Make your computer meets the minimum system requirements. Windows operating systems XP and Vista are supported, but older versions are not. Mac users of any version should set their computer's detection settings," then "USB mode," then select." i John Wiley/Demand Media Download and update Windows Media Player to the current version. i John Wiley/Demand Media Try to connect the Sansa Clip with another cable if these steps are unsuccessful. A faulty cable may be the issue. i John Wiley/Demand Media Update the Sansa Clip menu, go to the "Settings," then "USB mode," then select "MSC." i John Wiley/Demand Media Plug the Sansa Clip into your computer's USB port. i John Wiley/Demand Media Right-click on "My computer," and select "Manage" from the pop-up. A "Computer Management" window will appear. Go to 'System Tools," and then "Devices" in the right side of the menu, and uninstall. i John Wiley/Demand Media Select the "Action" button from the top menu, and choose to "Scan for hardware changes." Download Mizard. Choose the Sansa Driver Download Wizard. Choose the Sansa Clip from the option menu. At the "Driver Download" button. Run the program, and agree to the User Agreement. This will install the updater. i John Wiley/Demand Media Plug the Sansa Clip into the computer. Once it is recognized, continue with the installation. Your firmware and drivers will be updated automatically. SanDisk MP3 player NOT being detected by my computer when I connect it? This may be caused by one of the following: 1. Minimum system requirements were not met 2. Corrupted drivers 3. Computer restrictions 4. Power issue 5. Bad cable Please click here for Sansa Clip Sport. To resolve this issue, try the following solutions: NOTE: If the Sansa is frozen or hung it can prevent the device from being recognized by the computer. First try resetting your Sansa to ensure it is not frozen. see answer ID 188 SOLUTION 1 - For brand new player or first time connecting to this computer. For Windows XP users: verify the following operating system requirements are met. - Windows XP SP2 or higher - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: verify the following operating system requirements are met. - Windows XP users: by a Mac OS For Windows 7 & 8 users: Proceed to Solution 2 NOTE: If you are trying to connect to a Computer at work that is part of a network, there may be user right restrictions that are set to disable access to new hardware or stop any program installations. You may need to check with your IT administrator to see if this is causing the problem. SOLUTION 2 - Check Cable When connecting the Sansa to the computer if the screen comes on but does not show "Connected" on the screen the port is providing power however the data connecting to a different PC. If the Sansa still connects and charges but never shows connected on the screen even after trying different PC and cables contact SanDisk support to check warranty status. SOLUTION 3 - Refresh the driver STEP 1 - Connect the Sansa player to the PC The screen on your player should turn on, show 'Connected' and indicate the battery charging or full. - If the player does NOT turn on try other USB ports or on another computer if one is readily available. Ensure you are connecting directly to the computer USB hub. - Refer to "MTP Device Cannot Start code 10" if you get this error message - If there is nothing showing on the screen and the player does show up in as a storage device in an explorer window, then the screen is just NOT working. - If you receive the error "USB Device Not Recognized" on the computer, the player is most likely failed. Additional troubleshooting is unlikely to correct the problem. Note: If you experience either of the 2 issues above the issue is likely hardware related. Contact SanDisk technical support to check warranty status. STEP 2 - Check under Device Manager 1. Open the Computer Management Console Accessing the Computer Sansa MP3 Players can connect to your computer in MSC or MTP mode. Exceptions are Sansa Connect and Sansa Express which only use MTP mode. MTP mode is the recommended and default method for Sansa Players when used with Windows OS. The Sansa player will show up on Device (if the player is set to MSC) 2. Portable Device (if the player is set to MSC) 2. Portable Device (if the player is set to MSC) and the player is set to MSC) and the player will show up on Device Manager's right pane as: 1. USB Mass Storage device (if the player is set to MSC) and the player is set to MSC and the player is set to MSC) and the player is set to MSC and the player is set to MSC) and the player is set to MSC and the player is se (?) beside the device, try to refresh the drivers. STEP 3 - Refresh the drivers 1. Right-click the entry with the error mark, select Uninstall. 2. On the top menu click Action then select Scan for hardware changes. NOTE: If a device with yellow exclamation point (!) continually appears and disappears, then the player is most likely failed. Additional troubleshooting is unlikely to correct the problem. SOLUTION 4 - Connect using MSC mode Connecting in MSC mode will help determine if there is a problem with the Auto Detect mode feature of the player. You can use Forced MSC mode or switch the player settings to MSC. View instructions to connect in Forced MSC mode View instructions to switch player to MSC mode If the player is detected in MSC mode, try to update or reinstall the Sansa firmware NOTE: Sansa Connect do not have MSC mode, try to update or reinstall the Sansa firmware NOTE: Sansa firmware notes: If you have replaced the Sansa Player and you still have problems getting it to recognize in the computer. - Try using a different USB cable - Try connecting to the back USB ports which may supply better power. - If only MTP mode is NOT working, try reinstalling Windows Media Player - For Windows XP, install Windows Media Player 11 Was this answer helpful?
